Fund information

	Fund	Index
Fund AUM	\$1.0B	—
Number of holdings	101	1,934
Active share	80.0%	—
Market cap ¹	\$309.7B	\$274.5B
Earnings growth ²	21.2%	15.7%
Earnings revision ³	35.5%	30.6%
Price/earnings (FY1) ⁴	15.4x	16.6x
Return on equity (last 12 months)	17.2%	16.0%

Source: FactSet

¹ Weighted average

² Average of trailing one-year and forward one-year earnings per share (EPS growth)

³ Percentage of companies with positive EPS revisions less percentage with negative EPS revisions.

⁴ Forward one-year price/earnings estimates

Active share: Measures how much different portfolio weights in securities are from benchmark weights. The higher the active share, the more the portfolio differs from the benchmark.

Reported FactSet data is subject to revision over time, which may result in slight differences among data points reported during the same period.

Core, all-weather profile

- Reflects our conviction that excess returns are generated over time by investing in companies where free cash flow power is under-estimated by the market.
- A focus on uncorrelated idea generation and deep fundamental analysis.
- Growth and value both simultaneously essential for value creation.

Return of One-year forward free cash flow yield by quintile Global ex-U.S. Markets (1 January 1987 – 31 December 2025)

Data from January 1, 1987-December 31, 2025. Source: Empirical Research Partners Analysis. Monthly returns compounded and annualize. Does not reflect the performance of an investment product. Market performance does not reflect the impact of fees, expenses and transaction costs of investing. Free cash flow is a measure of profitability accounting for all sources and uses of cash, including capital expenditures and acquisitions.*

Why allocate to a portfolio:

- **Capitalize** on opportunity for dislocations between market expectations and our assessment of free cash flow growth.
- **Integrate** fundamental investment analysis, behavioral finance and multi-dimensional view of portfolio construction.
- **Focus** on idiosyncratic (stock specific) portfolio risk with no systematic style or other factor biases.
- **Deliver** core portfolios with the potential to outperform under a variety market backdrops.

Past performance does not guarantee future results. Asset allocation and diversification do not ensure a profit or protect against a loss.

*Starting from the stock universe of Global Developed ex U.S. Markets, if we rank the stocks in order by based on one-year forward free cash flow yield, then divide them into five equal sized groupings (quintiles), we see that the best quintile outperforms when looking at each decade and for the entire period. Note: Due to the date range of available data, the starting and ending decades contain less than ten years. For the developed markets (ex-U.S.) universe, the data provider uses a proxy for the MSCI World (ex-U.S.) Standard Index that covers 85% of the market capitalization of all countries that are included in that index.

Top 10 holdings⁵

	% of net assets
Taiwan Semiconductor Manufactu	6.8
Samsung Electronics Co Ltd	6.0

Morningstar percentile rankings are based on total returns. Morningstar ratings are based on risk-adjusted returns.

Returns represent past performance and do not guarantee future results. Share price, principal value, and return will vary and you may have a gain or loss when shares are sold. Current performance may be lower or higher than quoted. For the most recent month-end performance, visit www.PrincipalAM.com/mutual.

⁷ Performance assumes reinvestment of all dividends and capital gains.

⁸ MSCI ACWI Ex USA Index is a free float-adjusted market capitalization index that is designed to measure the combined equity market performance of developed and emerging market countries excluding the US.

⁹ Index performance information reflects no deduction for fees, expenses, or taxes. Indices are unmanaged and individuals cannot invest directly in an index.

¹⁰ Morningstar percentile rankings are based on total returns and do not reflect the inclusion of sales charges. If sales charges were reflected, rankings could be lower.

¹¹ The Morningstar Rating™ for funds, or "star rating," is calculated for managed products (including mutual funds, variable annuity and variable life subaccounts, exchange-traded funds, closed-end funds, and separate accounts) with at least a three-year history. Exchange traded funds and open-ended mutual funds are considered a single population for comparative purposes. It is calculated based on a Morningstar Risk-Adjusted Return measure that accounts for variation in a managed product's monthly excess performance, placing more emphasis on downward variations and rewarding consistent performance. The top 10% of products in each product category receive 5 stars, the next 22.5% receive 4 stars, the next 35% receive 3 stars, the next 22.5% receive 2 stars, and the bottom 10% receive 1 star. The Overall Morningstar Rating for a managed product is derived from a weighted average of the performance figures associated with its three-, five-, and 10-year (if applicable) Morningstar Rating metrics. The weights are: 100% three-year rating for 36-59 months of total returns, 60% five-year rating/40% three-year rating for 60-119 months of total returns, and 50% 10-year rating/30% five-year rating/20% three-year rating for 120 or more months of total returns. While the 10-year overall star rating formula seems to give the most weight to the 10-year period, the most recent three-year period actually has the greatest impact because it is included in all three rating periods. Morningstar ratings do not reflect the inclusion of sales charges. If sales charges were reflected, ratings could be lower.

¹² Class I shares were first sold on 03/01/2001. Returns for these shares prior to those dates, including since inception performance, are based on performance of R3 shares adjusted to reflect the fees and expenses of these shares. R3 shares were first sold on 12/06/2000.

¹³ The net expense ratio reflects contractual expense limits, if any, which may lower net expenses and cause the gross and net expense ratios to differ. In such cases a date is listed through which expense limits are expected to apply; however, Principal Funds and the investment adviser may mutually agree to terminate the expense limits prior to the end of the period. Returns displayed are based on net total investment expense.

Returns shown for periods of less than one year are not annualized.

International and global investing involves greater risks such as currency fluctuations, political/social instability and differing accounting standards. Risk is magnified in emerging markets, which may lack established legal, political, business or social structures to support securities markets.

Class I shares are available only to eligible investors, including various institutional investors and investors in certain mutual fund wrap or asset allocation programs. See the prospectus for eligibility requirements.

Carefully consider a fund's objectives, risks, charges, and expenses. Contact your financial professional or visit www.PrincipalAM.com for a prospectus, or summary prospectus if available, containing this and other information. Please read it carefully before investing.

Investing involves risk, including possible loss of principal.
