Fund information

	Fund	Index
Net assets	\$6.5M	—
Number of holdings	440	503
Dividend frequency	Quarterly	—
Active share	18.5%	—
Market cap ¹	\$666.8B	\$685.5B
Turnover ²	42.3%	—

Source: FactSet, Principal Global Investors, and State Street

¹ Weighted average

² Turnover is calculated semi-annually; reflects most recent available calculation.

Reported FactSet data is subject to revision over time, which may result in slight differences among data points reported during the same period.

Large-cap core ETF that adapts when equity market risks change

- Adapts portfolio construction to equity market risk.
- Combines quality, momentum, value, and low-volatility factors when and how they are most likely to outperform the market.
- Uses market-cap exposure when and where it's expected to matter most.

Exposures change during risk regimes

Top graph is shown for illustrative purposes only.
Source: Principal Global Investors. Risk regimes based on volatility and concentration risks which are derived from VIX and Principal Risk Concentration Index (PRCI). PRCI indicates when correlations are high, and the benefits of diversification are no longer present. Concentration is tracked across sectors, countries, factors, and asset classes.

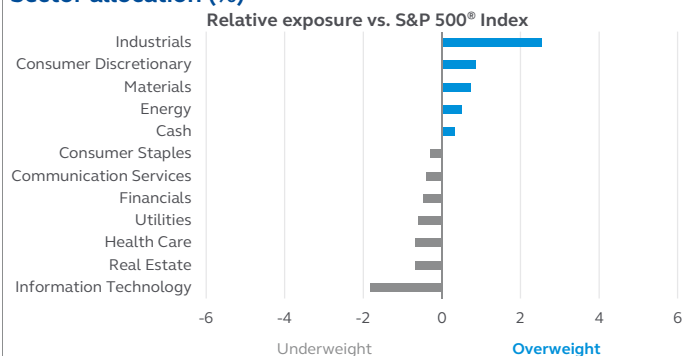

Why allocate to a portfolio:

- Diversify core equity exposures with a risk-based approach to adapting portfolio allocation
- Complement or replace active large-cap equity products with a low-cost, tax-efficient solution.
- Complement or replace core passive large-cap equity products with a solution that has active oversight.

Performance data quoted represents past performance. Past performance is no guarantee of future results and investment returns, and principal value of the Fund will fluctuate so that shares, when redeemed, may be worth more or less than their original cost. Current performance may be higher or lower than the performance quoted. Visit www.PrincipalAM.com/ETF for current month-end performance.

⁵ S&P 500® Index is a market-capitalization-weighted index of 500 widely held stocks often used as a proxy for the stock market.

⁶ Index performance information reflects no deduction for fees, expenses, or taxes. Indices are unmanaged and individuals cannot invest directly in an index.

⁷ The net expense ratio reflects contractual expense limits, if any, which may lower net expenses and cause the gross and net expense ratios to differ. In such cases a date is listed through which expense limits are expected to apply; however, Principal Exchange-Traded Funds and the investment adviser may mutually agree to terminate the expense limits prior to the end of the period. Returns displayed are based on net total investment expense.

⁸ 30-Day SEC yield represents net investment income earned by a fund over a 30-day period, stated as an annual percentage. Unsubsidized yield reflects the SEC yield when some fund expenses are not waived. Subsidized yield reflects a fund's yield when all expense waivers are included.

⁹ As of July 3, 2023. The distribution yield is calculated by annualizing actual dividends distributed for the dividend period (monthly, quarterly, etc.) ending on the most recent dividend distribution date and dividing by the net asset value for the same date. The yield does not include long- or short-term capital gains distributions.

Active share: Measures how different portfolio weights in securities are from benchmark weights. The higher the active share, the more the portfolio differs from the benchmark. Returns shown for periods of less than one year are not annualized.

Risks

Asset allocation and diversification do not ensure a profit or protect against a loss. Investing in ETFs involves risk, including possible loss of principal. ETFs are subject to risk similar to those of stocks, including those regarding short-selling and margin account maintenance.

Investor shares are bought and sold at market price (not NAV) and are not individually redeemed from the Fund. Ordinary brokerage commissions apply.

Equity investments involve greater risk, including heightened volatility, than fixed-income investments. Equities considered to be growth or value stocks may not perform as expected. Stocks that previously exhibited high momentum characteristics may not experience positive momentum or may experience more volatility than the market as a whole. The fund is non-diversified, so it may invest a high percentage of its assets in the securities of a small number of issuers and is more likely than diversified funds to be significantly affected by a specific security's poor performance.

Carefully consider a fund's objectives, risks, charges, and expenses. This material must be preceded or accompanied by a prospectus. Please read it carefully before investing.
