

Why REITs, why Principal

WHY LISTED REITS

- Historically a long-term total return enhancer relative to stocks and bonds
- Diversification through low correlations to other asset classes, while providing exposure to real estate across geographies and property types
- Potential inflation hedge, with dividends from a durable and often growing income-stream, plus capital appreciation tied to real asset ownership
- Liquid asset class, with immediate exposure to real estate

WHY PRINCIPAL

- Consistent and attractive risk adjusted returns¹
- Quality at a reasonable price investment style identifies long term opportunities
- Portfolio construction process that seeks to deliver consistent excess returns through a large number of medium-sized active weights

Since their establishment in the U.S. decades ago, publicly traded REITs have offered investors the combined benefit of commercial real estate investment along with the advantages of investing in publicly traded stocks. REITs have grown in size, impact, and market acceptance around the world. REITs, REOCs, and other real estate stocks own or operate trillions in real estate assets across all major global markets.

REITs are a total return investment, typically providing current income with the potential for long-term capital appreciation. REIT dividends and earnings are generated by a steady stream of contractual rents paid by tenants of their properties. The historical track record of REITs has demonstrated low correlations to stocks and bonds, a lower equity beta than stocks, and competitive long-term total returns. This is why investors should appreciate the differentiated behavior of REITs and the benefits they can offer their portfolio.

Increase total return potential

Most investors seek a well-diversified portfolio that maximizes risk-adjusted total-return potential. It's clear public REITs have a long-term track record of enhancing returns (evidenced by chart below). Public REITs offer numerous opportunities to invest in physical real estate operated by quality management teams with strong balance sheets. These companies can take advantage of opportunities in private real estate markets and some can provide access to unique areas of the property market.

Low correlations to other public equities

The behavior of REIT stocks also leads to important potential diversification benefits through low correlations. Although many investors assume public REIT prices move in tandem with public equities, global and U.S. REITs are not perfectly correlated to equity markets, despite offering the same benefits of liquidity. In fact, when an investor increases

their time horizon for holding REITs, as shown in the chart below, REIT returns behave less like equities and more like underlying private real estate. That type of behavior can add important potential diversification to a portfolio of equities and bonds.

EXHIBIT 2: REITs behave like private real estate, not stocks, over the long term

Over time the correlations of REITs rise with direct real estate and fall with equities

As of 30 September 2022.

Source: Analysis of data from FTSE NAREIT Equity REITs Index, NCREIF National Property Index, and S&P 500 Index from 1 July 1992 through 30 September 2022. Public REIT returns are lagged 4 quarters relative to private real estate returns to adjust for the return lag private equity funds experience due to less frequent measurement compared to public markets.

Public REITs have historically offered a hedge against inflation

In real estate markets, different property sectors can provide inflation hedge characteristics for a variety of reasons. For example, many net lease and healthcare companies have inflationary escalators, so in theory, these sectors may not be as negatively impacted by rising inflation as may be expected. Additionally, we would expect property sectors with shorter leases and those currently exhibiting pricing

power—such as hotels, residential, self-storage, and industrial—to also be somewhat more immune to rising inflation.

Since 2000, global REITs have exhibited stronger outperformance relative to equities in rolling 12 month time periods of above average inflation, as well as all periods where inflation was positive.

EXHIBIT 3: Historical performance during various inflationary environments

As of 30 September 2022.

Source: FactSet, U.S. Bureau of Labor Statistics. Indices represented: FTSE EPRA/NAREIT Developed and MSCI World indices. Rolling 12 month time periods from 1 January 2000 – 30 September 2022. Inflation represented by the YoY CPI (with an average of 2.44%). Past performance does not guarantee future results.

Historical trend of rising income stream

Historically, REITs have been sought after for their historically higher dividend yields compared to most equity products. Due to their structure, REITs are not subject to taxes at the corporate level, and they distribute the majority of their taxable income to shareholders as dividends. Importantly,

REIT dividends may provide a source of growing income for investors, with an average growth of 5.6% annually the past ten years. These growing cash flows are tied directly to the REIT's physical assets, with steadily improving occupancies and rents from leasing assets.

EXHIBIT 4: Over the last decade, Global REITs have had an average annual dividend growth rate of 5.6%

As of 31 December 2021.

Immediate exposure to real estate

As publicly traded entities, REITs are priced daily and are sometimes perceived as more volatile when compared to private equity real estate investments. However, the lagging appraisal method used by private real estate investments may not reflect large changes in real estate prices as they occur. The publicly traded nature of REITs reflects immediate changes in investor-required returns for real estate. Public

REITs also offer transparency to operations and investor scrutiny of management. REITs provide an alternative to investing in physical real estate, which often requires a large capital and time commitment, by allowing immediate exposure to commercial real estate with a relatively small amount of initial capital investment.

Multiple layers of diversification

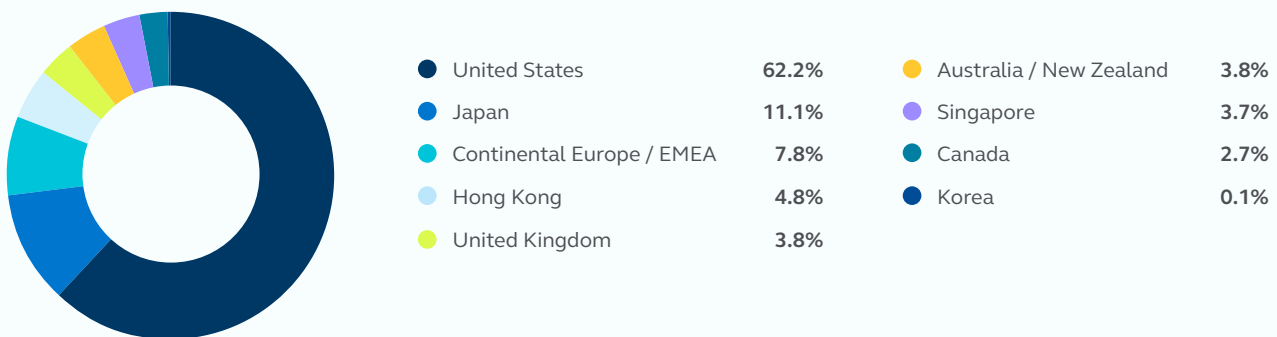

Market volatility illustrates the importance of deep diversification for investors. With REITs, investors have access to a variety of property markets, each market with its own demand and supply profile. Investors can also access property types that are not prominently available in the private

commercial market: hotels, healthcare, data centers, and self-storage. A global REIT strategy offers an additional layer of diversification by providing access to countries with different currencies, monetary policies, and economic cycles.

Why Principal

☑ The Principal Real Estate advantage

Our dedicated REITs capability was founded in-house by lead portfolio manager and chief investment officer, Kelly Rush. Kelly has led the team and strategy since the inception of the U.S. strategy in 1998, and has been with Principal for 35 years. Kelly and team are backed by a \$98.5 billion, top 10 global real estate manager² with over six decades of history investing in real estate. In their fundamental research work the REIT team can leverage the substantial in-house resources from private equity and debt real estate professionals, professionals in other asset classes across Principal, a team of global economists and top-notch technology and systems.

☑ Quality at a reasonable price investment style

When selecting stocks for the portfolio we emphasize owning quality companies at a reasonable price (QARP). Our experience has demonstrated, over long periods of time, portfolios with an emphasis on high quality companies may deliver attractive results.

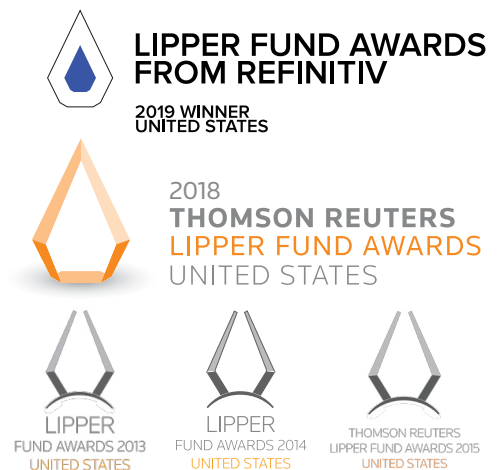

☑ Portfolio construction technique

Our Global and U.S. Real Estate portfolios are constructed with high active share ratios and our sources of alpha diversified across a relatively large number of medium-sized active weight positions.

Importantly, this investment approach strives to deliver consistent and attractive risk-adjusted returns to our clients and attractive information ratios, a key metric in measuring the ability of an active manager.

Historical track record attracts industry recognition

The Principal Real Estate portfolio management team manages the Principal Global Real Estate Securities Fund and the Principal U.S. Real Estate Securities Fund. Historically both funds have a long-term track record of consistent and attractive excess total returns.¹ This consistent out-performance has led to awards for our Global Real Estate Securities Fund (Class I), which received a Lipper award over the trailing 10-year period for 2018, and 2019, and received the award over the trailing 5-year period for 2013, 2014, and 2015.

Lipper Awards

The Principal Global Real Estate Securities Fund received the Best Global Real Estate Fund Award (Class I) from Lipper, Inc. over the trailing 10-year period for 2019 out of 25 funds that met Lipper's criteria for the 10-year time period, and for 2018 out of 24 funds that met Lipper's criteria for the 10-year time period. The fund received the Best Global Real Estate Fund Award (Class I) from Lipper, Inc. over the trailing 5-year period for 2013, 2014, & 2015. The fund did not win the award in 2016, 2017, 2020, or 2021.

The Lipper Fund Awards, granted annually, highlight funds and fund companies that have excelled in delivering consistently strong risk-adjusted performance relative to their peers. The Lipper Fund Awards are based on the Lipper Leader for Consistent Return rating, which is a risk-adjusted performance measure calculated over 36, 60 and 120 months. The fund with the highest Lipper Leader for Consistent Return (Effective Return) value in each eligible classification wins the Lipper Fund Award. For more information, see lipperfundawards.com. Although Lipper makes reasonable efforts to ensure the accuracy and reliability of the data contained herein, the accuracy is not guaranteed by Lipper.

Past performance is no guarantee of future results. Class I shares are available only to eligible investors, including various institutional investors and investors in certain mutual fund wrap or asset allocation programs.
